

■ The alternative

SE-TB1 (R11)

SE-TB1 604 (R12)

SE-TB1 636 (R13)

surfaces:

- certified slip resistance
- R11 from coil
- R12 / R13
- el-pol and color possible

materials:

1.4301 / 1.4404

Other materials and surfaces possible.

standard formats:

L x W
2500 x 1250 mm
3000 x 1250 mm
3000 x **1500** mm

coil: 1250/1500 mm

Fixed cuts from the coil to 8000 mm available at short notice.

thicknesses:

> 0.8 mm

< 4.0 mm

■ We shape steel.

www.schmidt-edelstahl.com

SCHMIDT EDELSTAHL
GmbH

■ Made in Germany

Especially suitable for:

- transport and conveyor technology
- automotive industry
- vehicle manufacturing
- machine cover
- facades
- cold storage room floor
- dividing wall construction
- packing machines

Advantages:

- reduced adhesion as an conductive and sliding plate
- greater stability and rigidity compared to smooth sheet
- cost savings through reduced material thickness
- offcut optimization
- low wear

Our new pattern SE TB1 provides an excellent alternative to the well-known stainless steel tear plates. Due to its improved slip resistance R11-R13 and noble appearance opens the SE TB1 in combination with different surface processing new visual effects for design and exhibiti-on area.

Whether as a non-slip base plate with a low rolling resistance or as an elegant wall covering, the SE-TB1 can be used in various fields.

The advantages of the SE TB1 are obviously. Already thin bottom plates are enormous resistant at a lower weight. The weight advantage compared to conventional plate with

lug pattern is 3 mm thick already at more than 6 kg/m². With our modern cut-to-length line, we are able to deliver within a very short time fixed lengths from coil and sheet goods.

As a family business with many years of experience in the field of patterned stainless steel surfaces, we will help you during your planning phase.
